Sequence 1, Application US/09069023A
Patent No. 6348573
Regneral information:
APPLICANT: Nunez, Gabriel
APPLICANT: Noseki, Takeyoshi
APPLICANT: Koseki, Takeyoshi
APPLICANT: Koseki, Takeyoshi
APPLICANT: Koseki, Takeyoshi
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR IDENTIFYING APOPTOSIS
TITLE OF INVENTION: SIGNALING PATHWAY INHIBITORS AND ACTIVATORS
FILE REFERENCE: UM-03333
CURRENT APPLICATION NUMBER: US/09/069,023A
CURRENT FILING DATE: 1998-04-27
NUMBER OF SEQ ID NOS: 38
SOFTWARE: Patentin Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Length 531;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 1, Application US/09019942

Patent No. 6148573
GENERAL INFORMATION:
APPLICANT: Nunez, Gabriel
APPLICANT: Inchara, Nachiro
APPLICANT: Roseki, Takeyoshi
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR IDENTIFYING APOPTOSIS
TITLE OF INVENTION: SIGNALING PATHWAY INHIBITORS AND ACTIVATORS
TITLE OF INVENTION: WORDER: US/09/069,023A
CURRENT APPLICATION NUMBER: US/09/069,023A
CURRENT FILING DATE: 1998-04-27
NUMBER OF SEQ ID NOS: 38
SSOFWARE: Patentin Ver. 2.0
SEQ ID NO 27
LENGTH: 540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                      Gaps

Patent No. 5756334
GENERAL INFORMATION:
APPLICANT: PERLER, FRANCINE B.
APPLICANT: SOUTHWORTH, MAURICE W.
TITLE OF INVENTION: RECOMBINANT THEROMSTABLE DNA POLYMERASE
TITLE OF INVENTION: FROM ARCHAEBACTERIA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ä
                                                                                                                                                                                                                                                                                                The present sequence represents the heavy chain variable region for monoclonal antibody (MAb) 2B4, which immunoreacts with a lead cation. The sequence was derived from RNA isolated from mouse hybridoma cells. The protein can be used for binding heavy metals, such as lead cations. It can be used for detecting, removing, adding or neutralising the heavy metals in biological and inanimate systems. It can be used in e.g. aqueous liquid systems, in biological or environmental systems or in such compositions as perfames, cosmetics, pharmaceuticals, health care products, skin treatment products, pesticides, herbicides, solvents used in the production of semi-conductor and integrated circuit components and production materials for electronic components. The products can provide for applications involving minute amounts of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    FYADSVKDRFTISRDDSQSMLYLQMNNLKTEDTAMYYCVRRGASGIDYAMDYWGQGTSLT 120

AAR90829-39 are monoclonal antibodies or a binding fragments produced by using insect guts, partic. insect brush border membranes (BBMs), esp. corn rootworm, as antigen; immunising a donor animal with the antigen; isolating immunised animal; fushing bisolating immunocompetent B cells from the immunised animal; fushing B cells with a tumour cell line; isolating the fused cells, culturing them and cloning positive hybrid cells; and screening the hybrid cells for prodn. of the required Mabs. The Mabs bind to the gut of a target insect but do not bind to mammalian BBMs. The DNA sequence can be operably linked to a toxin moiety, esp. selected from e.g. Bacillus toxins, lymenoptera and control of insect pests, e.g. Coleoptera, Diptera, Hymenoptera and Lepidoptera. The pesticidal compsn. is pref. applied to a plant, e.g. maize.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAR90829-39 are monoclonal antibodies or a binding fragments produced by

using insect guts, partic. insect brush border membranes (BBMs), esp. corn rootworm, as antigen; immunising a donor animal with the antigen; isolating immunocompetent B cells from the immunised animal; fusing B cells with a tumour cell line; isolating the fused cells, culturing the and cloning positive hybrid cells; and screening the hybrid cells for prodn. of the required MABs. The MABs bind to the gut of a target insect but do not bind to mammalian BBMs. The DNA sequence can be operably linked to a toxin molety, esp. selected from e.g. Bacillus toxins, Pseudomonas exotoxin and phytolaccin, etc. The Abs are useful for control of insect pests, e.g. Colcoptera, Dibtera, Hymenoptera and Lepidoptera. The pesticidal compsn. is pref. applied to a plant, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The patent discloses a novel retroviral vector, particularly Spleen Necrosis Virus (SNV) vector, having target cell specificity. The vector has a targetting envelope which is a chimeric protein consisting of an antigen binding site of an antibody (e.g. anti-DNP-scFv) or another
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Retroviral vector; cell specific gene transfer; Spleen Necrosis Virus; SNV; antibody-envelope fusion protein; retroviral envelope protein; gene therapy; antigen binding site; single chain antibody; human;

peptide that binds to a specific cell surface protein, fused to the carboxy terminal part of the retroviral envelope protein. The presence of the wild type envelope protein serves as a helper molecule to improve or supplement a functional membrane fusion domain. The antigen binding site replaces the natural viral receptor binding site. The retroviral vector is used for cell specific gene transfer, especially in gene therapy. The invention overcomes the restricted host range limitation of retroviral vectors. The present sequence is an anti-Herzneu single chain antibody (scA). The coding sequence of this antibody was used in the construction of plasmid pAJ7 which contains a tagetting vector comprising the anti-Herzneu scA fused to the SNV-Env(envelope)-TM(transmembrane) coding region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents the heavy chain variable region for monoclonal antibody (MAb) 6F5, which immunoreacts with a lead cation. The sequence was derived from RNA isolated from mouse hybridoma cells.

The protein can be used for binding heavy metals, such as lead cations. It can be used for detecting, removing, adding or neutralising the heavy metals in biological and inanimate systems. It can be used in e.g. aqueous liquid systems, in biological or environmental systems or in such compositions as perfumes, cosmetics, pharmaceuticals, health care products, skin treatment products, pesticides, herbicides, solvents used in the production of semi-conductor and integrated circuit components and production materials for electronic components. The products can provide for applications involving minute amounts of specific heavy metals.
                                                                                                                                                                                                                                                     Gaps

The present invention relates to a new method of inhibiting stenosis or restenosis of a blood vessel following vascular injury in a subject. The new method comprises administering to the subject agents which inhibit the adhesion and/or recruitment of neutrophils and mononuclear cells to a site of vascular injury by binding CD18 or CCR2. The method of the invention inhibits stenosis or restenosis of a blood vessel following vascular injury arising from a vascular intervention procedure such as vascular injury arising from a vascular intervention procedure such as vascular injury arising from a vascular intervention procedure such as vascular injury arising from a narogary. The method is also useful for treating a subject having an inflammatory disease or condition and praft versus host disease. Chronic inflammatory diseases of the lung, collagen diseases, and insulin-dependent diabetes mellitus can also be treated. The method is further useful for treating inflammatory bowel diseases, such as ulcerative collitis. Additional diseases or conditions including systemic anaphylaxis of hypersensitivity responses, and inflammatory dermatoses, autoimmune diseases such as a rithitis, graft rejection and other diseases including atherosclerosis. The present sequence represents sequence contains three CDR's that can be used to inhibit stenosis or restenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Murine; humanised antibody; CC-chemokine receptor 2; CCR2; nephrotropic; neuroprotective; immunosuppressive; human immunodeficiency virus; HIV infection; cytostatic; vasotropic; leukocyte trafficking; allergy; inflammatory disorder; autoimmune disorder; rheumatoid arthritis; shock; multiple sclerosis; atherogenesis; atherosclerosis; restenosis; asthma; anaphjaxis; malignancy; inflammation; stenosis; allograft rejection; fibrotic disease; angloplasty; acquired immune deficiency syndrome;

free patent discloses a humanised antibody or its antigen-binding fragment, having binding specificity for CC-chemokine receptor 2 (CCR2), comprising an antigen binding region of non-human origin and at least a portion of an immunoglobulin of human origin. The humanised antibodies are useful for inhibiting the interaction of a cell expressing CCR2. They are useful for inhibiting or treating CR2. They are useful for inhibiting or treating cell for inhibiting a real floking, for treating CCR2-mediated disorders such as renumatory disorder, autoimmune disorders such as rheumatorid arthritis and multiple sclerosis. They are useful in therapy or diagnosis, and in the manufacture of a medicament for traating CCR2 mediated disease. They are also useful for treating allergy, anaphylaxis, and in the manufacture of a medicament for treating allergy, anaphylaxis, and in the manufacture of a medicament for treating allergy, anaphylaxis, and in the manufacture of a medicament for treating allergy, anaphylaxis, and in the manufacture of a medicament for treating allergy, anaphylaxis, and in the manufactured allergic reaction, shock, stenosis, allograft rejection, including angioplasty and/or stent placement in a mammal. Humanised antibodies are also useful for inhibiting narrowing of the lumanised antibodies are also useful for inhibiting narrowing of the luman of a vessel in a mammal, and inhibiting neointimal hyperplasia of a vessel in a mammal, preferably associated with vascular intervention. The present sequence is the heavy chain variable (VH) region of murine ID9 antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1;

The patent discloses a humanised antibody or its antigen-binding fragment, having binding specificity for CC-chemokine receptor 2 (CCR2), comprising an antigen binding region of non-human origin manised antibodies are useful for inhibiting the interaction of a call expressing CCR2. They are useful for inhibiting the interaction of a call expressing CCR2. They are useful for inhibiting or treating I leukocyte trafficking, for treating CCR2-mediated disorders such as renamatory disorder, autoimmune disorders such as rheumatory disorder, autoimmune disorders such as rheumatorial and multiple sclerosis, atherogenesis and atherosclerosis, and for inhibiting restenosis. They are useful in therapy or diagnosis, and in the manufacture of a medicament for treating CCR2 mediated disease. They are also useful for treating allergy, anaphylaxis, malignancy, chronic and acute inflammation, histamine and IgE. mediated allergic reaction, shock, stenosis, allogist rejection, fibrotic disease, asthma, inflammatory glomerulopathies, acquired immune deficiency syndrome (ALDS), restenosis associated with vascular intervention, including angioplasty and/or stent placement in a mammal-Humanised antibodies are also useful for inhibiting narrowing of the lumen of a vessel in a mammal, and inhibiting neointimal hyperplasia of

                                                                                                                                                                                                                                                                                                                                                                                                       ï
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention describes a novel method for the detection of a mammalian infection by an acid-resistant microorganism (A) by treating a faecal sample with at least two different monoclonal antibodies (MAD) (or their fragments or derivatives) or aptamers (collectively (I)) and detecting formation of a complex (C) between (I) and the corresponding antigen of (A). The first and second (I) bind to epitopes of different antigens (Ag). These epitopes are present, after passage through the intestines, in at least some mammals, and have either: (I) their native structure; or (II) a structure against which an antibody is produced by an animal infected or immunized with (A), or its extract, lysate, derived protein or fragment, or with a synthetic peptide. Practically all mammals display at least one of the specified epitopes. The method is used to detect infection by acid-fast bacteria, particularly of the genera Helicobacter,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Detecting infection by acid-fast microbes for diagnosis of Helicobacter pylori, comprises reacting a faecal sample with two binding reagents for antigens that survive intestinal passage
a vessel in a mammal, preferably associated with vascular intervention. The present sequence is murine antibody 1D9 heavy chain variable region
                                                                                                                                                                                                                                                                                                                                                                                                                   Acid-resistant microorganism; detection; faecal; intestine; infection; monoclonal antibody; heavy chain.

The method involves administering an antagonist of CC chemokine receptor 2 (CCR2) and optionally an immunosuppressive agent. The CCR2 antagonist may be an anti-CCR2 antibody (i.e. containing light and heavy chain complementarity determining regions from various non-human origins). CCR2 is known to be involved in the rejection of transplanted grafts. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mouse, graft rejection, CC chemokine receptor 2 antaqonist;
CCR2 antagonist; anti-CCR2 antibody; kidney transplant; liver transplant;
lung transplant; heart-lung transplant; pancreas transplant;
bowel transplant; heart transplant; graft versus host disease;
chronic graft rejection; antibody heavy chain variable region; mAb 1D9.
Mycobacterium and Campylobacter, specifically H. pylori, H. hepaticus, M. tuberculosis, C. jejuni and C. pylori. (1) may also be used therapeutically. The method is direct and non-invasive, and provides an inexpensive and easily standardizable diagnosis, despite possible degradation of antigens during passage through the intestines. This sequence represents the H. pylori 26 kba protein-binding antibody (DNS ACC2355) heavy chain which is used to illustrate the method of the

method of the invention is useful for inhibiting graft rejection - particularly allografts such as kidney, liver, lung, heart-lung, pancreas, bowel and heart. The method of the invention is also useful for inhibiting graft versus host disease and for inhibiting chronic rejection of a transplanted graft. The present amino acid sequence represents a mouse antibody heavy chain variable region (mAb 1D9).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    "Substitution of Thr residue normally present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to a new method of inhibiting stenosis or restenosis of a blood vessel following vascular injury in a subject. The new method comprises administering to the subject agents which inhibit the adhesion and/or recruitment of neutrophils and monounclear cells to a site of vascular injury by binding CD18 or CCR2. The method of the invention inhibits stenosis or restenosis of a blood vessel following vascular injury arising from a vascular intervention procedure such as vascular by-pass or transplantation surgery. The method is also useful mediated by neutrophil and monounclear cell activity e.g. asthma and graft versus host disease. Chronic inflammatory diseases of the lung.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               collagen diseases, and insulin-dependent diabetes mellitus can also be treated. The method is further useful for treating inflammatory bowel alseases, such as ulcerative colitis. Additional diseases or conditions include inflammatory or allergic diseases and conditions, including systemic anaphylaxis of hypersensitivity responses, drug allergies, psoriasis and inflammatory dermatoses, autoimmune diseases such as arthritis, graft rejection and other diseases including atherosclerosis. This sequence represents the variable region of one of several humanised in 109 heavy chains (AAU09927-AAU09930). These heavy chains were used in

The humanised antibodies are useful for inhibiting the interaction of a cell expressing CCR2. They are useful for inhibiting or treating HIV infection. The proteins of the invention are useful for inhibiting
                                Humanized immunoglobulin for treating a CC-chemokine receptor 2-mediated disorder in a patient, comprises a binding specificity for CCR2, and a non-human antigen binding region and human immunoglobulin

leukocyte trafficking, for treating CCR2-mediated disorders such as inflammatory disorder, autoimmune disorders such as riceumatoid arthritis and multiple sclerosis, atherogenesis and atherosclerosis, and for inhibiting restenosis. They are useful in therapy or diagnosis, and in the manufacture of a medicament for treating classes. They are also useful for treating callergy, anaphylaxis, malignancy, chronic and acute inflammatory, anaphylaxis, malignancy, chronic and acute inflammatory glomerulopethies, acquired immune deficiency syndrome (AIDS), restenosis, allograft rejection, fibrotic disease, asthma, inflammatory glomerulopethies, acquired immune deficiency syndrome (AIDS), restenosis associated with vascular intervention, including angioplasty and/or stent placement in a mammal. Humanised antibodies are also useful for inhibiting nacrowing of the lumen of a vessel in a mammal, and inhibiting neointimal hyperplasia of a vessel in a mammal, preferably associated with vascular intervention.

The present sequence is humanised murine ID9 antibody heavy chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ä

The present invention relates to a new method of inhibiting stenosis or restenosis of a blood vessel following vascular injury in a subject. The new method comprises administering to the subject agents which inhibit to the adhesion and/or recruitment of neutrophils and mononclear cells to a site of vascular injury by binding CD18 or CCR2. The method of the invention inhibits stenosis or restenosis of a blood vessel following vascular injury arising from a vascular intervention procedure such as vascular injury arising from a vascular intervention procedure such as vascular by-pass or transplantation surgery. The method is also useful for treating a subject having an inflammatory disease or condition mediated by neutrophil and mononuclear cell activity e.g. asthma and collated by neutrophil and mononuclear cell activity e.g. asthma and collated by neutrophil and mononuclear cell activity e.g. asthma and cell seated. The method is further useful for treating inflammatory bowel diseases, such as ulcerative collits. Additional diseases or conditions systemic anaphylaxis of hypersensitivity responses, drug allergies, psoriasis and inflammatory dermatoses, autoimmune diseases such as a trinities, graft rejection and other diseases including atherosclerosis. This sequence represents the variable region of one of several humanised the invention for the production of anti-CCR2 antibody or antigen-binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;
chain sequence (AAU09919). Specification states the mutation as N30S but as sequence has Asn at position 30 the mutation is likely to be S30N"

The present invention relates to a new method of inhibiting stenosis or restenosis of a blood vessel following vascular injury in a subject. The new method comprises administering to the subject agents which inhibit the adhesion and/or recruitment of neutrophils and mononclear cells to a site of vascular injury by binding CD18 or CCR2. The method of the invention inhibits stenosis or restenosis of a blood vessel following vascular injury arising from a vascular intervention procedure such as vascular by-pass or transplantation surgery. The method is also useful for treating a subject having an inflammatory disease or condition mediated by neutrophil and mononuclear cell activity e.g. asthma and graft versus host disease. Chronic inflammatory diseases or condition mediated. The method is further useful for treating inflammatory bowel diseases, such as ulcerative collitis. Additional diseases or conditions include inflammatory or allergic diseases and conditions, including systemic anaphylaxis of hypersensitivity responses, drug allergies, systemic anaphylaxis of hypersensitivity responses, drug allergies, while some conditions and inflammatory dermatoses, autoimmune diseases such as a condition or arresponse to the condition of the condition of a condition or arresponse to the condition of a condition or arresponse to the condition of the condition of the condition of conditions and inflammatory dermatoses and condition of conditions and conditions and conditions are conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents the variable region of one of several humanised 1D9 heavy chains (AAU09927-AAU09930). These heavy chains were used in the invention for the production of anti-CCR2 antibody or antigen-binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Murine; humanised antibody; CC-chemokine receptor 2; CCR2; nephrotropic; neuroprotective; immunosuppressive; human immunodeficiency virus; HIV infection; cytostatic; vasotropic; leukocyte trafficking; allergy; inflammatory disorder; autoimmune disorder; rheumatoid arthritis; shock;
                                                                                                                                                                                                                                                                 Inhibiting stenosis or restenosis of a blood vessel following vascular
                                                                                                                                                                                                                                                                               injury or angioplasty in a subject by administering agent which inhibits recruitment or adhesion of neutrophils, mononuclear cells to injury site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 FYADSVKDRFTISRDDSQSMLYLQMNNLKTEDTAMYYCVRRGASGIDYAMDYWGQGTSLT 120

fragment, having binding specificity for CC-chemokine receptor 2

(CCR2), comprising an antigen binding region of non-human origin
and at least a portion of an immunoglobulin of human origin. The
humanised antibodies are useful for inhibiting the interaction of
a cell expressing CCR2. They are useful for inhibiting or treating
CC HIV infection. The proteins of the invention are useful for inhibiting
CC HIV infection. The proteins of the invention are useful for inhibiting
CC HIV infection. The proteins of the invention are useful for inhibiting
CC arbitits and multiple solerobis, atherogenesis and atherosorslers such as
inflammatory disorder, autoimmune disorders such as rheumatoid
and for inhibiting restenosis. They are useful in therapy or diagnosis,
and for inhibiting restenosis. They are useful in therapy or diagnosis,
and for inhibiting restenosis. They are useful in therapy or diagnosis,
and in the manufacture of a medicament for treating allergy, anaphylaxis,
malignancy, chronic and acute inflammation, histamine and IgE.
CC disease. They are also useful for transine and IgE.
malignancy, chronic and acute inflammation, histamine and IgE.
(Fibrotic disease, asthma, inflammation, histamine and inhibiting narrowing of the
intervention, including angioplasty and/or stent placement in a mammal.
CC Humanised antibodies are also useful for inhibiting narrowing of the
luman of a vessel in a mammal, preferably associated with vascular intervention.
CC The present sequence is humanised murine ID9 antibody heavy chain
multiple sclerosis; atherogenesis; atherosclerosis; restenosis; asthma; anaphylaxis; malignancy; inflammation; stenosis; allograft rejection; fibroric disease; anaphoplasty; acquired immune deficiency syndrome; AIDS; inflammatory glomerulopathy; vascular intervention; 1D9 antibody; neoIntimal hyperplasia; VH; heavy chain variable region; 1D9RHC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Humanized immunoglobulin for treating a CC-chemokine receptor 2-mediated disorder in a patient, comprises a binding specificity for CCR2, and a non-human antigen binding region and human immunoglobulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

Patent No. 566600

GENERAL INFORMATION:

APPLICANT: Carcai, Nadine B.

TITLE OF INVENTION: Antibodies which Bind to Insect Gut

TITLE OF INVENTION: Proteins and their Use

NUMBER OF SEQUENCES: 49

CORRESPONDENCE ADDRESS:

ADDRESSEE: Clba-Geigy Corporation

STREET: 7 Skyline Drive
                                                                                                                                                                             Length 115;
                                                                                                                                                                                                         Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
